### **IMMUNIZATION POLICY**

The physicians in our practice agree that immunizing children is one of the most important and effective measures that we can provide to safeguard the health of our patients. All authoritative health organizations recommend vaccination of children against deadly and damaging contagious diseases.

In accordance with our conviction that vaccines are necessary for each individual patient, and our concern for the safety of our infant patients who are not yet fully immunized, our practice has adopted a policy that we will not continue to provide medical care to patients whose parents decline the following recommended vaccinations.

- Hepatitis B vaccine
- Diphtheria, tetanus, acellular pertussis (DTaP or Tdap) vaccine
- Diphtheria tetanus (DT or Td) vaccine
- Haemophilus influenzae type b (Hib) vaccine
- Pneumococcal conjugate vaccine
- Inactivated poliovirus vaccine (IPV)
- Measles-mumps-rubella (MMR) vaccine
- Varicella (chickenpox) vaccine
- Meningococcal vaccine
- Hepatitis A vaccine
